

MLUNGISI BOTTOMLEY NKOMO

Computer Engineer · Cybersecurity & Embedded Systems

Lefke, Cyprus · +90 548 858 5813 · mlungisibnkomo87@gmail.com

github.com/Botomley · linkedin.com/in/mlungisi-nkomo-a8a19a1b9 · botomley.github.io

PROFILE

Computer Engineering graduate (Lefke European University) specialising in cybersecurity tooling, network engineering, and embedded systems. Builder of full-stack security platforms — autonomous threat hunting, phishing detection, and real-time system monitoring — with hands-on enterprise IT experience. Comfortable across the stack: Python/Flask backends, machine-learning detection pipelines, responsive front-ends, and Arduino/C++ hardware. Open to opportunities in security engineering, networking, and software development.

EDUCATION

Diploma in Computer Engineering

Lefke European University — Cyprus · 2022 – 2025

Software engineering, embedded systems, network architectures, and digital electronics. Specialised coursework in microprocessors (ARM/RISC, real-time OS, peripheral interfacing in C and Assembly) and cybersecurity foundations (network security, ethical hacking, cryptography, secure system design).

A-Level Sciences

Zimbabwe · 2020 – 2022

Distinctions in Mathematics, Physics, and Computer Science.

EXPERIENCE

Freelance Web Developer

Remote / Cyprus · 2024 – Present

- Design and deliver responsive websites and full-stack applications for clients: portfolio sites, cybersecurity dashboards, and landing pages in HTML/CSS/JS and Python.
- Own the full lifecycle — requirements, UI design, backend, deployment, and support.

IT Department Intern

Bastaslar Sunvalley — Lefke, Cyprus · 2023 – 2024

- Network monitoring, hardware maintenance, and user support across enterprise IT operations.
- Applied cybersecurity protocols and worked with enterprise ticketing systems.

Student Lab Assistant

Lefke European University · 2022 – 2023

- Supported labs in circuit design, PCB prototyping, Arduino projects, and microprocessor programming.

KEY PROJECTS

NYX — Autonomous Threat Hunter · github.com/Botomley/nyx-threat-hunter

Autonomous cyber-defence platform: Flask + Socket.IO event bus, Isolation Forest ML anomaly detection, rule-based detectors, and honeypots with a real-time dashboard.

PhishShield — Phishing Detector · github.com/Botomley/phishshield

Full-stack phishing detection system: ML backend scoring 30+ URL features, JavaScript frontend, fully Dockerized for deployment.

CyberShield — System Security Monitor · github.com/Botomley/cybershield-monitor

Live security dashboard tracking CPU, RAM, disk, network traffic, and processes with real-time alerts.

TraceScanner — Network Scanner · github.com/Botomley/tracescanner

Threaded subnet scanner with live progress, colour-coded results, and export (Python/Tkinter).

Arduino-Based 3D Scanner · github.com/Botomley/arduino-3d-scanner

Cost-effective cylindrical 3D scanner: Arduino MEGA, VL53L0X time-of-flight sensor, stepper motors, and a Python point-cloud visualiser. Presented at Lefke EU.

TECHNICAL SKILLS

Languages	Python, C/C++, JavaScript, HTML/CSS, SQL, Assembly
Security & Networks	Network monitoring, phishing detection, anomaly detection (ML), Zero Trust concepts, ethical hacking, cryptography, Scapy
Frameworks & Tools	Flask, Socket.IO, scikit-learn, NumPy/Pandas, Docker, Git, Linux, SQLite, Tkinter
Embedded & Hardware	Arduino, ARM/RISC microprocessors, real-time OS, sensor integration, PCB prototyping

ADDITIONAL

- Nationality: Zimbabwean, based in Lefke, Cyprus.
- Services delivered: web development, embedded builds, security audits, UI/UX for dashboards, tech consultation, and technical support.
- Portfolio with live project pages, code, and demos: **botomley.github.io**
